

CONTACTORS & OVERLOAD RELAYS

*Switch on
to the Best*

Introduction

Salzer was established in 1985 with German Collaboration for Rotary switches to bring to the Indian Industry world class technology in Low voltage switchgear Products, coupled with dependability and excellence in service, to the delight of all end users.

We seek to understand the requirements of our clients and provide them the perfect electrical solution. All our ongoing developmental activities for innovative and value-added products are driven by this sense of responsibility.

As an ongoing development Salzer now INTRODUCES CONTACTORS AND OVERLOAD RELAY to the Indian and Global market.

Standard Contactors - Non Reversing (SC)

SC series contactors are ideal for motors, actuator, solenoid and other power switching applications, carries,  IEC and  markings which makes them suitable anywhere in the world .

Features

- Compact size – Four (4) frames rating from 9A to 105A.
- High fault short circuit rating of 100kA @ 600V with Class J Fuses.
- 4 Terminal Coils on all SC Series AC/DC Contactors for control application flexibility.
- 50A to 105A DC operated devices feature electronic coil control.
- BR2 Series Overload Relays direct mount onto SC Series 9-25A Non - Reversing Contactors, reducing installation time and space.
- Removable / replaceable ID Marker for SC Series Contactors and Front Mounted Auxiliaries (SCFA series) Device identification marker for labeling contactors and front mounted auxiliary contacts simplifies trouble shooting in panels with many contactors.
- Snap on front mounted auxiliary contacts can be installed without the use of tools for lower installed cost.
- Side Mounted Auxiliaries(SCSA series) and Electrical & Mechanical Interlock (SCMI & SCMEI series) can be installed without using any tools on to SC / RC Series Contactors.
- Markings and labels high visibility for ease of troubleshooting and maintenance.
- Environmentally friendly contacts are cadmium free and non-metallic materials are asbestos, halogen and cadmium free.
- Dual IEC and NEMA terminal markings for ease of wiring anywhere in the world.
- 35mm DIN rail mounting for all the contactors from 9A to 105A for fast and easy installation and removal or panel mounting for more secure installation in high shock and vibration applications.
- IP20 guarded terminals prevent accidental contact with live parts.
- Combination head terminal screws allow the use of straight, Phillips or posidrive screwdrivers. Allen head screws on 50A through 105A contactors make it easy to apply the proper terminal tightening torque for secure conductor connections.
- Single circuit are available and it can be purchased on your need.

Unique Product Features

4 TERMINAL COILS

4 terminal coils on 9A – 105A AC and DC operated contactors are easily accessible on contactor and overload relay assemblies or contactor and motor protection circuit breaker assemblies. The control circuit can be wired from the line side or the load side of the contactor, whichever is most convenient for the installation. Control circuit wire runs can be minimised, and the devices can be easily substituted in your existing equipment without disturbing or changing your control wires. So no matter what components are being used, SC series Contactors can be easily and quickly wired, reducing your labour and installation costs.

Standard Contactors - Reversing (RC)

RC series contactors are ideal for Reversing motors in applications where panel space is a premium and device modularity is required to satisfy virtually any application requirement carries  IEC and  which makes them suitable anywhere in the world.

A common mechanical interlock, power wiring modules and IP 20 guarded terminals with dual terminal marking and shared accessories will help reduce your total installed cost and enhance the features and performance of your equipment.

Features

- High fault short circuit rating of 100kA @ 600V with Class J Fuses.
- BR2 Series Overload Relays direct mount onto RC Series 9 – 25A Reversing Contactors, reducing installation time and space.
- MP Series Motor Protection Circuit Breakers direct mount onto RC Series 9-40A Reversing AC/DC Contactors AC and DC operating coils for control circuit application flexibility. 50A to 80A DC operated devices featured electronic coil control.
- Environmentally friendly contacts are cadmium free and non-metallic materials are asbestos, halogen and cadmium free.
- IP20 guarded terminal accidental contacts from live parts.
- Dual IEC and NEMA terminal markings for ease of wiring anywhere in the world.
- Devices identification marker for labeling contactors and front mounted auxiliary contacts simplifies trouble shooting in panels with many contactors.
- Power wiring modules provide reliable, rigid interconnections between the forward and reverse contactors.
- Combination head terminal screws allow the use of straight, phillips or posidrive screwdrivers.
- Allen head screws on 50A through 80A contactors make it easy to apply the proper terminal tightening torque for secure conductor connections.
- Snap-on front mounted auxiliary contacts install without the use of tools for lower installed cost.
- Single circuit are available and it can be purchased on your need.

Unique Product Features

4 TERMINAL COILS

RC series Reversing Contactors feature a single side mounted electrical and mechanical or mechanical only interlock that is used for the whole range of contactors, enabling a 9A contactor to be interlocked with a 105A contactor. The side mounted interlock doesn't increase the depth of the contactor and doesn't prevent front mounted auxiliary contacts from being added to either the forward or reverse contactors. Contactors are physically secured together with a dovetail bracket that installs from the bottom of the contactor – so it can't fall out when it is installed on a DIN rail or on a panel, even in high vibration applications.

Accessories

Front Mounted Auxiliary Contacts

Front mounted auxiliary contacts feature IP20 guarded terminals to protect against accidental contact with live parts. The device identification marker simplifies trouble shooting in panels with many contactors. These contacts snap-on and install without the use of tools.

SCSA20X	2 Normaly Open*	NO 84 53 54 NO 74 63 73

Note: For use with SCSA11 or SCSA20 when more than one side mounted auxiliary contact module is installed on the same side of the contactor.

Interlocks

Mechanical Interlock

Side mounted mechanical interlock for use with reversing contactors, reversing starters, two speed starters and star-delta starters. The single interlock can be used with all size contactors from 9A-105A, Preventing the forward and reverse contactors from being energised at the same time.

Electrical & Mechanical Interlock

Electrical / Mechanical interlock for reversing contactors has the same features as the mechanical interlock but also has two normally closed auxiliaries built into the unit for electrical interlocking, eliminating the need for two normally closed auxiliary contacts and the Mechanical Interlock. The result of integrating the normally closed auxiliary contact is decreased width of reversing contactors and more available auxiliary contact locations.

Code	Description
SCMI	Side Mounted Mechanical Interlock
SCMEI	Side Mounted Electrical / Mechanical Interlock

Wiring Modules

Reversing contactors power wiring modules make field assembly of reversing contactors easy. Line and load side over molded copper bus bar conductors ensure error free installation and make a rigid assembly with a mechanical interlock (SCMI) or electrical / mechanical interlock (SCMEI).

Code	For Use With Contactors
SCRWS25	SC009,SC012,SC018,SC025

Accessories for Non-Reversing & Reversing Contactors

The complete range of SC Series Non-Reversing Contactors and RC Series Reversing Contactors share common accessories including single circuit front mounted auxiliary contacts, two circuit side mounted auxiliary contacts, a single electrical/mechanical or mechanical interlock, and coil mounted surge suppressors.

Designing starter assemblies and panels is easy - you don't have to remember which auxiliary is required for each contactor they all work together.

Installation is easy too - once you learn how to install each accessory, it's always the same no matter what contactor it's being installed on. If simple design and assembly isn't enough - you'll also reduce your inventory and maximize its flexibility, because unique accessories are not required for each size contactor.

Electrical Life In Utilization Category

To find a Contactor's Estimated Life:

1. Identify the Utilization Category of the Application.
2. Refer to the chart For the Applicable Utilization category.
3. Locate the Intersection of the Life-load Curve For the Contactor Selected with the Application Breaking Current (Ie) on the Horizontal Axis of the Chart.
4. Read the estimated Contactor Life From the Vertical Axis of the Chart.

The Life -load curves are based on tests in accordance with IEC 60947-4-1. Many Conditions of an actual application effect contact life such as the environment and duty cycle, therefore, the actual contact life may vary from the life Indicated by the curves shown here.

Mini Contactors

Mini Contactors and Control Relays

Salzer Mini Contactors and Control Relays are compact family of control devices for switching motors and other logic control circuits. MR Series Mini Reversing Contactors are ideal for reversing motors in applications where panel space is a premium and device modularity is required to satisfy virtually any application requirement. Common accessories enable the devices to be customized for each application. For motor overload protection, Overload Relays can be directly mounted to mini contactors.

Product features include

- High fault short circuit rating of 100kA @ 600V with Class J Fuses .
- Removable / replaceable ID Marker for MC Series Contactors and CR Series Control Relay, Device identification marker for labeling contactors and front mounted auxiliary contacts simplifies trouble shooting in panels with many contactors.
- MP Series Motor Protection Circuit Breakers direct mount onto MR Series Reversing AC/DC Contactors.
- Markings and labels, high visibility label for ease of troubleshooting and maintenance
- Compact size – one frame size for devices rated up to 16A.
- AC and DC operating coils for control circuit application flexibility – device is the same physical size with an AC or DC coil.
- Modular design and common snap-on accessories are easily installed without the use of tools, lowering assembly and installation costs.
- Front Mounted auxiliary contacts and surge suppressors install directly on top of the single front mounted mechanical interlock when used with our Mini reversing contactor.
- Miniature contactors compatible with directly mounted BR1 series overload Relays with current ratings from 0.28 to 17A.
- Over load relays are Class 10 with selectable manual or automatic reset, and provide phase loss sensitivity.
- IP20 guarded terminals with dual terminal markings prevent accidental contact with live parts.
- Device identification marker for labelling the contactor or control relay simplifies trouble shooting in panels with many devices.
- Universal ratings and markings: A, kW and HP rating as well as applicable 3rd party certification markings.
- 35mm DIN rail mounting for fast and easy installation and removal without the use of tools, panel mounting for more secure installation in high shock and vibration applications. Mini Non-Reversing contactors and Control Relays feature printed circuit board mounting with an accessory link module.
- Control relay includes bifurcated contacts rated 16A, AC-1, A600, and Q600 for high switching applications upto 600V.
- Four pole control relay with NO and NC contact configuration.

Unique Product Feature

The Printed Circuit Board Link Module installs directly on the Terminals of mini contactors and control relays enabling them to be directly mounted on an electronic printed circuit board. The module is rated 16A AC-3 and 22A AC-1 to take full advantage of the maximum switching capability of the mini contactor and control relay.

The insulated, wiring modules provide error free interconnections for reversing the power poles, and provide the electrical interlock through the integrated normally closed auxiliary contacts.

Accessories for Mini Contactors and Control Relays

The complete range of Mini Contactors and Control Relays share common accessories including auxiliary contacts, mechanical interlock, electronic timers, reversing wiring modules, surge suppressors and a printed circuit board link module. Designing starter assemblies and panels is easy – you don't have to remember which auxiliary is required for each contactor or control relay, they all work together. Installation is easy too – once you learn how to install each accessory, it's always the same no matter what contactor or control relay it's being installed on. If simple design and assembly isn't enough – you'll also reduce your inventory and maximize its flexibility, because unique accessories are not required for each size contactor or control relay.

Mini Contactors & Control Relays

Reversing Mini Contactors

Auxiliary Contacts

Front mounted auxiliary contact modules feature IP20 guarded terminals to protect against accidental contact with live parts. The modules are available in 2 and 4 circuit configurations. The device identification marker simplifies trouble shooting in panels with many devices. These modules snap on and install without the use of tools.

Contact Configuration			
Code	No	NC	For Use With Contactors
MCFA20	2	0	MC007 MC009 MC012 MC016

Maximum Number of Front Mounted Auxiliary Contacts	
Coil Specification	Maximum Number
AC Coils : 110V/50Hz, 120V/60Hz, 480V/60Hz, 600V/60Hz	Up to four additional poles
DC Coils : 12V, 24V, 110V, 125V, 250V	Up to two additional poles

Printed Circuit Board Link Module

The printed circuit board module enables mini contactors and control relays to be mounted directly on electronic printed circuit boards. The module is rated 16A AC-3 and 22A AC-1.

Printed Circuit Board Link Module	
Code	Description
MCPCLM	Printed Circuit Board Link Module

Wiring Modules

Reversing contactor power wiring modules make field assembly of reversing contactors easy.

Wiring Module	
Code	For use with Contactors
MCRWM16	MC007, MC009, MC012, MC016
LIS	Line Side
LDS	Load Side

Electronic Timers

Right side mounted electronic timers are available in On-Delay and off-Delay configurations with timing ranges up to 30 seconds. The modules install without the use of tools, and can be used in conjunction with all other accessories.

Electronic Timers			
Code	Function	Timing Range(Secls.)	Voltage
MCETN03V240	On-Delay	0.3 ~ 3	24 ~ 240V AC/DC
MCETN10V240		1 ~ 10	
MCETN30V240		3 ~ 30	
MCETF03V060	Off-Delay	0.3 ~ 3	24 ~ 60V AC/DC
MCETF10V060		1 ~ 10	
MCETF30V060		3 ~ 30	
MCETF03V240	Off-Delay	0.3 ~ 3	100 ~ 240V AC/DC
MCETF10V240		1 ~ 10	
MCETF30V240		3 ~ 30	

Mechanical interlock

Our front mounted mechanical interlock is for reversing contactors. The interlock prevents the forward and reverse contactors from being actuated at the same time. Auxiliary contact modules, surge suppressors, and timers can be used in conjunction with the mechanical interlock.

Mechanical Interlock	
Code	Description
MCMI	Front Mounted Mechanical Interlock

Surge Suppressors

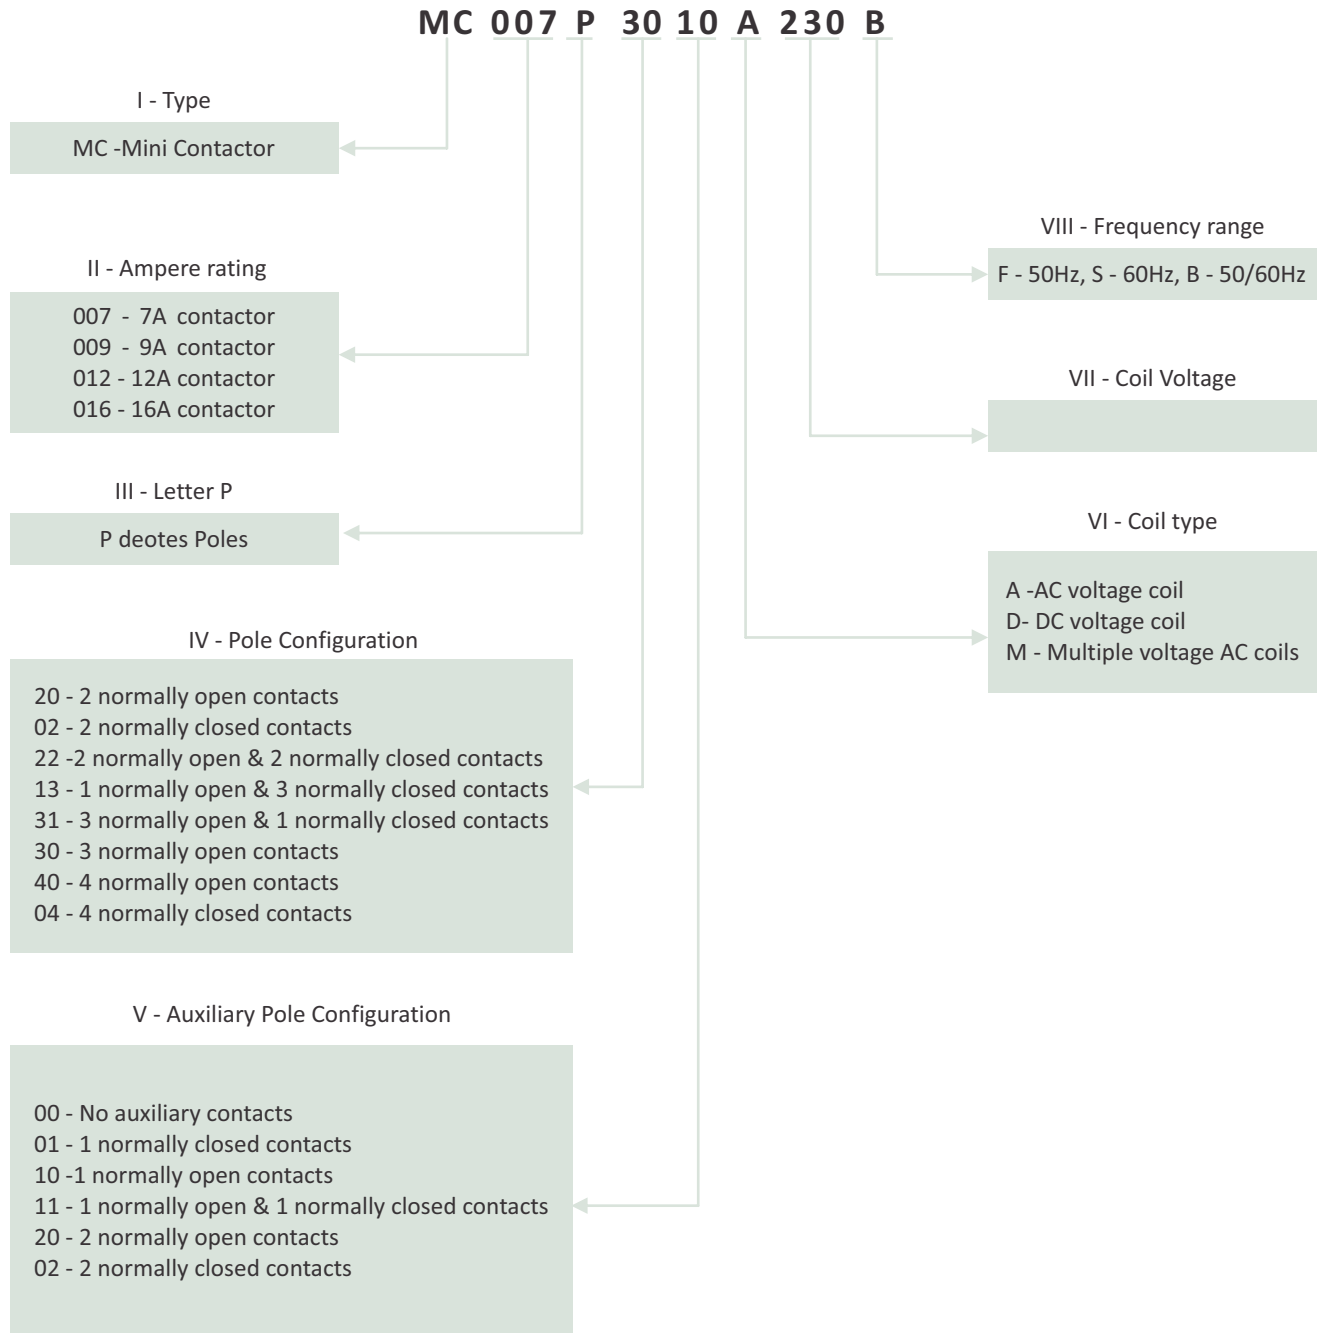

Front mounted surge suppressors protect sensitive electronic components from damaging line voltage spikes. The modules install without the use of tools, and can be used in conjunction with all other accessories.

Surge Suppressors		
Code	Voltage Range	Type
MCRCA024B	12 ~ 24V 50/60Hz	RC
MCRCA048B	24 ~ 48V 50/60Hz

Bimetallic Overload Relays

Salzer BR Series Bimetallic Overload Relays provide thermal Trip Class 10 overload protection for single and three phase motors, and phase loss protection for three phase motors. Other features like IP20 guarded terminals with dual terminal markings, integral stop button, and direct mounting will help you to reduce your total installed costs and enhance the features and performance of your equipment.

Features

- BR1 series Overload Relays for use with MC Series Mini Contactors.
- BR1 series Overload Relays include integral connection to auxiliary and coil terminations for ease of wiring during installation when installed on MC Series Mini Contactors.
- BR1 series Overload Relays share the same great features and benefits of the larger frame sizes.
- Trip Class 10 for reliable and accurate protection against overload conditions.
- Single phase sensitivity to protect motors against damaging phase loss conditions.
- Direct mounting to all contactors, including BR1 Overload Relays for use with Series MC Mini Contactors.
- IP20 guarded terminals prevent accidental contact with live parts.
- Combination head terminal screws allow the use of straight, phillips or posidrive screwdrivers.
- Stop button for convenient and economical control circuit wiring.
- Ambient temperature compensation ensures reliable motor protection even in high temperature environments.

Unique Product Feature

A - Automatic Reset Only
 AUTO - Automatic Reset and Test
 H - Manual Reset Only
 HAND - Manual Reset and Test

Salzer BR Series Bimetallic Overload Relays feature a multi-function reset button enabling the user to select the reset mode—manual or automatic and whether or not to enable the test function. When the reset button is pressed, with the reset function enabled, the Normally Open (NO) contact closes and the Normally Closed (NC) contact opens to verify the control circuit functionality. In addition, the NC contact can be used in a “Stop” circuit. With the test function disabled, the NO and NC contacts do not change state when the reset button is pressed—preventing unauthorized personnel from operating the control circuit. Multiple functions in a single device help you to reduce inventory and customize the overload relay operation to provide the performance and features you need for your specific application.
